

Release Notes – AssetWise Inspections Mobile version 01.12.01

AssetWise Inspections Mobile version 01.12.01 has been released to both app stores.

New Features/Enhancements:

- media from previous reports can be copied (or not) into the new report on upload
- icons in lists have a larger pressable area
- media can be added to fields on inspection type templates
- default values have been implemented in the app
- report drawer menu shows the report's cover image if available

Bug Fixes:

- fixed camera opening twice in a row on some devices
- fixed a bug that caused assets to be deleted automatically even when there were active reports
- report and maintenance screens should not crash anymore
- number inputs now accept leading negative signs
- multicapture mode should no longer cause problems when taking pictures from different parts of the app
- fixed incorrect forms showing for some report types
- locally created maintenance items that are deleted are removed from the list
- duplicate RFG forms no longer cause report to crash

Android Specific Bug Fixes:

- fixed pictures being saved as videos

iOS Specific Bug Fixes:

- fixed screen getting cut off on certain devices in certain orientations
- loading the list of reports available to download on an asset no longer requires user input (should load automatically with a network connection)
- video and image upload fixes
- fixed a bug where elements would indicate they have comments when they do not (was also causing app to crash)
